

LUIS FELIPE OLIVEIRA BORGES

Java/Spring Developer (Full Stack)

Goiânia - GO | (64) 98152-0101 | proff0lfob@gmail.com | [linkedin.com/in/lfobproff](https://www.linkedin.com/in/lfobproff) | github.com/LDTLuis

PROFESSIONAL PROFILE

Java/Spring Developer with a full stack project in production: an online booking and payments platform for a multi-branch spa (Spring Boot, PostgreSQL, React/TypeScript), with payment integrations, webhooks, and 275 automated tests in CI. Previous experience in QA and L2 support brings a focus on quality, testing, and database troubleshooting (Oracle SQL).

TECHNICAL SKILLS

Backend: Java 21, Spring Boot, Spring Security, Spring Data JPA/Hibernate, REST APIs, JWT, OpenAPI/Swagger

Frontend: TypeScript, React, Vite, React Router, TanStack Query, CSS Modules

Databases: PostgreSQL, Flyway, Oracle SQL, MySQL

Testing: JUnit 5, Testcontainers, Cypress, Selenium, Postman

DevOps & Build: Docker, Maven, GitHub Actions, Railway

Integrations: Mercado Pago, Asaas, Google Calendar API, AWS SNS, Webhooks

Methodologies: Scrum, Kanban, Jira

Languages: English (Intermediate), Spanish (Intermediate)

PROFESSIONAL EXPERIENCE

Service Desk Analyst — MáximaTech 02/09/2026 – Present

- Perform L2 technical troubleshooting with Oracle SQL (inner joins, updates) to investigate and resolve systemic incidents at the root cause.
- Identify and track bugs through database analysis, giving engineering teams detailed technical context.
- Manage incidents and requests via Jira, with L2 triage, escalations, and SLA compliance.

QA Analyst — Facilita Vendas 11/24/2025 – 02/05/2026

- Run automated Cypress tests on critical flows and regression suites.
- Test front-end, back-end, and mobile, validating business rules, API consumption, and end-to-end flows.
- Create test cases and manage the defect lifecycle via Jira, collaborating with developers and POs in an agile environment.

QA Intern — MáximaTech 03/10/2025 – 11/21/2025

- Create, run, and document functional, regression, and manual tests, validating deliveries before production release.
- Identify and track bugs across the SDLC, working with development and product teams on requirements analysis.

EDUCATION

Software Engineering

Centro Universitário de Goiás (UNIGOIÁS) • 07/2023 – 07/2027 (expected graduation)

PROJECTS

Casa Bali Spa — online booking and payments platform spacasabali.com

Java 21 · Spring Boot 4 · PostgreSQL · React 19 · TypeScript

- Built the REST API and the website with admin dashboard for a multi-branch platform in production: real-availability booking, shopping cart, online payment, and gift cards.
- Integrated Mercado Pago and Asaas (Pix and card) behind a common gateway interface, with idempotent confirmation and refund webhooks and per-branch credentials.
- Synced branch schedules with the Google Calendar API and the Trinks system, receiving events via AWS SNS with signature validation.
- Prevented overlapping bookings, even under concurrent requests, using PostgreSQL exclusion constraints (GiST); schema versioned with Flyway.
- Implemented stateless authentication with JWT, refresh token rotation, BCrypt, and brute-force protection.
- Wrote 275 automated tests (JUnit 5 + Testcontainers with a real PostgreSQL), run on GitHub Actions on every pull request.
- Built 30+ screens in React + TypeScript without a UI library, using TanStack Query, automatic session renewal, and a focus on accessibility.

HR Management System — Java and Spring Boot, with full CRUD, Spring Security, and automated testing with Selenium. github.com/LDTLuis/AppRH-Java-Spring
